

Relius Proposal 10.0 Hardware Requirements

Last Updated March 28, 2013

The Relius Proposal application is certified and supported running under various Windows operating systems and workstation hardware. Below is a list of the recommended minimum requirements for acceptable performance of the application and related components. Note that your performance will vary based on the workload, open applications, memory, multi-tasking, and network infrastructure. Please review the material below and if you have any questions, please contact Relius Technology or your sales representative. These recommended hardware requirements are designed to address a typical IT environment. For more information or to discuss your specific needs in more detail, please call us today at 800-326-7235, ext. 1100.

Section 1 – Relius Proposal Hardware Requirements:

Stand-alone or Workstations (**base system**)

Network File Server (**optional**)

- Intel or AMD processor 2.0GHz or greater
- Minimum 1 GB RAM or greater (2 GB or more for Vista or Windows 7)
- Local DVD-ROM drive
- Minimum 1 GB free space on local drive
- Supported Operating Systems (32-bit or 64-bit):
 - ✓ Windows XP SP3 Home or Professional
 - ✓ Windows Vista SP2
 - ✓ Windows 7
- 1024x768 screen resolution
- A high-speed Internet connection and browser

Section 2 – Additional Considerations

- 2-1) The Relius Proposal program executables are run from the workstation's local hard drive or the file server location.
- 2-2) Relius Proposal executables must be installed on a FAT32 or NTFS file systems.
- 2-3) The Relius Proposal directory is located at \Program Files\Relius\Proposal.
- 2-4) Windows must be installed to a local hard drive using the default Windows system root. Relius Proposal cannot be run under Windows that is run from a network drive.
- 2.5) Windows 8 is not supported at this time.
- 2.6) Although Relius Proposal operates successfully on many different network environments and configurations, only a TCP/IP network is specifically tested/supported. If you intend to operate Relius Proposal in a different network environment, our ability to provide support and operational assistance of these environments may be limited.
- 2.7) Relius Proposal is not supported on ghost, cloned, mirrored, or restricted workstations. The workstation user is expected to have administrator rights to their local drive and registry. Roaming profiles are not supported with the Relius Proposal application.

- 2.8) A local DVD-ROM drive is required on each Relius Proposal workstation for installation purposes.
- 2.9) Most Windows-compatible laser printers will work with the Relius Proposal software. SunGard Relius highly recommends the Hewlett Packard LaserJet Series or compatible printers. These printers are fully supported by Windows, Novell, and most other software available on the market. Possible conflicts may exist with HP 'L' series printers and this model should not be used with Relius Proposal. For plans with large numbers of participants you will need to consider printer duty cycle, print speed, turnaround times, etc.
- 2.10) PcAnywhere, VNC, GoToMyPC and similar products are not supported for use with Relius Proposal. For remote access only Terminal Services with the Remote Desktop are tested and supported for use with Relius Proposal. Use of these unsupported products may interfere with the proper operation of Relius Proposal.
- 2.11) Internet access on at least one PC in the Relius Proposal operating environment supporting standard email, HTTP web browsing, and FTP is required, as software updates, fixes, and support services are delivered through the Internet.
- 2.12) The use of non-Windows products for networking, drive locations, and communication channels are not tested or supported for use with Relius.
